Brooklyn Borough Hall #2

By Anthony Aguilar- 6th grade

Brooklyn President Eric Adams has done a lot. The one I'm focused on is opening CUNY and CSHL, a DNA experimenting lab. CUNY is an acronym for City University of New York. CSHL is an acronym for Cold Spring Harbor Laboratory. "Every New York City student can have a hands-on opportunity to learn about genetics and how it impacts their lives. Imagine analyzing your own DNA and that of other living organisms.

Eric Adams has done so much for us, and opening this for us gives us to learn more about our genetics and DNA, in all, Science.

The DNA lab gives middle and high school students across the city an opportunity to learn about their DNA and genetics. "We are now ready to serve the city's 1.3 million students." They opened the lab to teach students DNA and genetics, and they are now ready to let them explore. Learning about your DNA and how genetics influence the world from a young age can spark a student's curiosity and encourage them to pursue a

career in science or medicine." The DNALC NYC leverages the technology of a world leader in genetics research and education and the largest public, baccalaureate college of technology in the Northeast." The DNALC NYC helps us learn the genetics, because its a world leader in genetics technology.
